Dear Mr. Emburgh and Mr. Kanipayor:

Re: Evaluation of the Aqasure™ STEPPI™ Technology - Pro 3000™ Test Kit

Thank you for providing the Aqasure Pro 3000™ test kit for evaluation and comparison testing. A preliminary evaluation of test results indicate that this technology is a simple but effective method for screening water samples for the presence of Total Coliforms and E. Coli bacteria.

Comparative tests, between the STEPPI™ technology and the standard methods used by Saskatchewan Health to test for Total Coliforms and E. Coli, were conducted by the Earth Sciences Unit of PFRA in cooperation with the Provincial Health Laboratory between April 25th and May 19th, 2001. A summary of test procedures and test results will be made available by June 30th, 2001.

As you are aware, PFRA's Technical Service is currently working on the Sustainable Water Well Initiative (SWWI). The overall goal of this initiative is to improve the sustainability of water well supplies by providing better technical advice to our rural clients. This initiative involves working with the water well industry, water testing and treatment specialists, researchers, and appropriate provincial government personnel to develop and promote methods used to diagnose and prevent well problems.

- 2 -

The portability of the STEPPI™ test equipment, the simplicity of the test procedures and the reduced time between sampling and analysis make this technology an excellent tool for encouraging more frequent monitoring of water well supplies.

We wish your company success and look forward to working with you in the future.

Yours truly,

John Lebedin
Manager, Earth Sciences Unit - PFRA
Agriculture and Agri-Food Canada
