## **ICBS acquires 25% interest in BioSpec Global Solutions Inc.**

New York, Montreal ,July 14, 2009 –**ICBS Ltd. (OTCPK: [ICBT](#))**, announced today that it has acquired Twenty five percent interest in BioSpec Global Solutions Inc.

BioSpec Global Solutions has developed state-of-the-art technologies for rapid, onsite (remote) monitoring of microbial contamination in drinking water, recreational water, agriculture & food production, pharmaceuticals and medical applications.

The TOGS 9000 is a bio-photonic incubation/detection instrument which quantifies microbial contamination. The analysis results can be obtained directly on-site through a computer or can be directly connected and controlled by an appropriate laboratory and or regulatory authority in a secure monitoring system using 'AGACSS<sup>TM</sup>' software and the internet. As an example, The EPA could literally monitor all drinking water sources down to the individual well owner and do it quickly, accurately and cost effectively. Or the Center for Infectious Diseases ( CID ) could monitor the spread of antibiotic resistant microbes (ARMs) across the U.S. at the patient level. Doctors could determine the effectiveness of an antibiotic in their office for their patients before prescribing the antibiotic rather than the try and hope method presently used. The healthcare system could save hundreds of millions of dollars and hospital/doctor liabilities reduced. This technology is revolutionary for a global market. BIOSPEC believes the progression of this technology is leading towards wireless data transmission. Connecting the AQUASURE 9000 to a cell phone like device for data transmission to a laboratory much the same way pictures are sent by a cell phone will be cost effective, allowing the technology to penetrate the huge consumer market which presently isn't addressed.

BIOSPEC technology is recognized as the method for the detecting of microbial contamination. By entering in to a series of license agreements with well positioned companies (industry leaders), intellectual property protected, and its varied applications and global use realized .

The company holds worldwide patents on the TOGS 3000 and 9000.
